A Monthly In-House Journal

150th BIRTH ANNIVERSARY
SRI AUROBINDO
(Dt. 15.08.2021 to 15.08.2022)
SRI AUROBINDO MANDIR
SECTOR -

From the Chairperson's Desk

Dear All,

RIMS celebrated the 'Saraswati Puja', the most adored and revered Goddess of Vidya. For us this month remains one of the most awaited as we welcome the goddess to our campus and ask for her blessings for all of us. This year was no different; however, the only difference was that 'Maa Saraswati' was welcomed amidst all the protocols of Corona. Though the celebration was a little gentle in nature, the spirit was never dull. We have a feeling that she has always been kind towards us. It is her blessings for which RIMS has always been strong in academic achievements.

God Bless You

Chairperson, RIMS
Mrs. Nalini Prava Pattnaik

ENCOURAGING THE COURAGE: (ACADEMIC COURAGE FOR STUDENTS)

Animo!.....basically known as courage; is the mental and physical strength to venture, persevere to withstand the fear and pain; and so the academic courage is defined as perseverance in the face of academic difficulty and fear and its role in predicting academic performance (literacy and arithmetic) and various academic engagement measures (planning, task management, disengagement, class participation, enjoyment of college life, and positive academic intentions).

Teaching students to have courage actually helps students to handle adversity. You might think that as students, they don't go through adversity but they do in everyday of their life right from starting to get from bed in order to prepare to go to college to being present in the class along with other students. You might think it's funny and everybody literally does that in student life but that's where we start lagging. Having the confidence to fear the unknown and sail through difficult psychological and physical problem what decides their future.

A teacher can effectively inspire courage in the classroom by teaching students what it means to be courageous and what it looks like in real-life situations. Encouraging courage can definitely prevent certain deep irrelevant activities of students like loss of self-confidence or low confidence, avoiding eye contact with teachers in classroom or parents at home, a state of helplessness inside them as students don't easily agree to it, in order to keep their relevance intact within other students and thus processing themselves as self-handicapping and a being a pessimist.

Not everybody is at the same intellect and so it is very easy for the low performing or low confident

student to get intimidated by the top performers of the class.

Let your students know that when things are difficult, it's OK to be fearful and make mistakes — that's how we learn, instead of just putting them in the chains of perfectness always.

Academic courage need not be a great affair but it can be as simple as raising your hand to ask or answer a question. So it is essential for teachers instead of focusing on only the sporadic empirical attention; should encourage, recognize, and celebrate when students show a little courage, because they might not realize they're doing it.

Perseverance in the face of academic difficulty is assessed via the persistence. i.e.; the students should be acknowledged with the art of practising something which they want to be expert in, thus also building up their strength in this manner. So teachers should also focus on the persistency of the students to focus rather than just looking into the results. This creates a great response for the students. Fear is assessed through anxiety. Classroom anxiety may be a much lesser known fact but equally important which needs to be balanced for the character build of a student. So it is important to understand that not all students can be of same caliber or can be great in same area of studies. Every student should be encouraged to explore their hidden talents and practise it regularly to gain momentum in life.

employee performance, job satisfaction, engagement, In the largest organizations, this HR function is split among Confidence is hypothesized to be indicated by high perseverance through academic difficulty and relatively low fear. Avoidance is hypothesized to be indicated by low perseverance through academic

difficulty and high fear. Helplessness is hypothesized to be indicated by low scores on both these dimensions.

Thus a few steps can be taken in order to help the students:

Find the Root Cause of the problem: Most of the time when we lack courage in one area we are self-conscious. We believe ourselves to be deficient in that area. The first step is helping students to find where this belief comes from and encourage them to challenge the thinking that keeps them stuck.

Share your own bravery stories: It is highly possible that some of things that your students are facing might have been faced by your or your dear ones while being a student and thus chances are there that you would be very much relatable with these instances. So teachers can share their hardship and how they felt and how they came of the challenges.

How to make Friends as a Young Adult

Remember how easy it was to make friends in elementary school? Not only we were less worried about being rejected, we also weren't as picky about whom we were hanging out with.

The COVID-19 pandemic has changed everything, including our friendships. Social distancing has made it difficult to meet new people and stay connected with the familiar ones. Being a young adult, the task of making new friends has become a lot more difficult. So instead of trying, we sadly accept the fact that our friend circle is shrinking. If you are also thinking in this way, let me tell you, you

Make your class a safe place: Help students feel safe to take risks and fail. They should be taught not to judge each other and how to react when their classmates fail or score high. Sometimes teachers might experiment to fail in front of students so they can practice responding to you and see your reaction to your own.

Helping students be their best versions: Courage is interlinked with failing well and building grit. Let's focus on this critical skill to help our students be the best they can be.

PROF. SMRITI REKHA BEHERA

Faculty, RIMS

Dreams don't work
unless you do

HOW TO MAKE FRIENDS AS A YOUNG ADULT

Remember how easy it was to make friends in elementary school? Not only we were less worried about being rejected, we also weren't as picky about whom we were hanging out with.

The COVID-19 pandemic has changed everything, including our friendships. Social distancing has made it difficult to meet new people and stay connected with the familiar ones. Being a young adult, the task of making new friends has become a lot more difficult.

are not alone my friend. I am sharing some tips for the above mentioned title. They are not scientifically proven, but they have worked for me. So here we go:

1. First and foremost, you are not the only one.

The new Gen-Z experiences difficulties in making friends. It's something that we are all either currently dealing with or have dealt with in the past. We just aren't open about it, which brings me to my next point.

2. We need to talk about it.

The more we can recognize that talking about this not only helps us to reduce the individual shame that we might be experiencing, but also actually provides the pathway to closer friendships. It will ultimately help us in building and sustaining our connection.

3. Get set up!

Think about the people in your social network ... that can connect you with other people you may not know. We already have blind romantic dates, so why not a blind friendship ones?

4. Deepen your casual connections.

Find a common ground you can bond over, like a hobby or interest! Talk about your life, what you like to do in your free time, etc.

5. Remind yourself why you're doing it.

Now I know you're thinking ... this all sounds so awkward. And as a member of Gen Z, I am all too familiar with the anxiety that comes with approaching new people. Don't worry its part of the process. Just keep your eye on the prize: a new friend!

6. Quality not quantity.

It is exhausting to commit yourself to hanging out with a million different people. So focus on the people with whom you truly want to build deeper relationships. To be honest, we are all too busy to be giving our whole selves to every single connection, which brings me to my final point.

7. Know when to let go, or at least kind of let go.

It is important to deepen meaningful relationships, but it's also okay to drift from some people. Whether we're moving, growing up, or changing, sometimes we lose certain connections — and that is okay! Because the more we can do to normalize that kind of change, the better we will be able to shift our attention to the relationships and friendships that we really need and value.

PROGRAMMING LANGUAGE

There are various types of programming languages. According to Wikipedia, there are nearly 700 programming languages whereas other surveys states that more than 4000 programming languages are there. When it comes to programming languages, people often gets confused what are the different types of programming language. Basically, there are three types of programming languages high level, middle level and low level.

High level programming languages are the languages which are more user friendly, and are easy to understand by the programmers. Some of the examples are pascal, sql, etc.

Middle level languages are the type of language which has the properties of both **Ruby** high level as well as low level language. Languages such as C, C++ are called as middle level language because they exhibit the functionalities of both high and low level languages.

Low level languages are hard to read and understand. The codes of these languages are more likely to be understood by the computer. Example - assembly language and machine language.

There are many programming languages out there. A large portion of them are easy to learn and has great features, but very few of them are highly popular and have a large market share. Some of the languages are as follows:-

Popular Programming Languages

R – It is one of the most popular languages. It is used for statistical computing and graphical visualization of data.

JavaScript – This programming language is used in nearly every aspect of web. It might be frontend, backend, web apps, and websites.

C#- C# is a very well known in the gaming sector. It is used to for game development. The reason is, it provides better security and is robust in nature.

Python– It is a beginner friendly programming language. This programming language is used in data science, app development and backend.

These were some of the popular programming languages which are used widely for quite a time. But when it

comes to salary nearly all the programming languages provide high paying salary.

According to the survey of stack overflow, Clojure developer has the high paying salary among all the programming languages. But when the availability of jobs or in demand is taken into consideration, JavaScript frameworks come at the top.

Highest paying programs

Kotlin – Kotlin was launched in 2011 and by theyear 2017, it became the official programming language for Android app development by the Google. It provides a salary 120,000 a year on an average.

C# - This programming language is used to game development especially mobile games. It is auto scalable which give it a major advantage among other programming languages. Developer gets a salary more than 300,000.

travelled to Ford's headquarters to barter the terms of the deal.

Python– Python was launched in 1980s, but it is on top in terms of code readability and salary. It is used in the fields of web development, data analysis and machine learning.

FAILURE IS A STEPPING STONE TO SUCCESS

Failure and success are the 2 sides of a coin. Like success, we should accept failure also. This saying means that if a person fails once, he/she should not lose heart. He must observe his mistakes and try to overcome them in his next attempt.

Repeated efforts lead one to success; Failures give us a replacement point of view through which we will achieve success. So, we should always regard failure as the first step or a steppingstone to success.

Ratan Tata had several failures during his career, however in 1998; he launched the Tata Indica Car. Unfortunately, the car did not attract buyer interest, prompting the board and committee members to recommend that Ratan Tata sell the vehicle to Ford. Ratan Tata then

Ford Chairmen said that how did you get into the corporate once you haven't any experience with passenger your company. After knowing this, he returned to Mumbai without signing

the contract. This word didn't depress him, but rather boosted his self-assurance. With his passion and dedication, he hoped to beat the critics.

Tata Indica was profitable after a couple of years, and Ford Company released two luxury automobiles, Jaguar and Land Rover, at an equivalent time.

However, Ford Company suffered a loss at the time. The tables were turned, and Ratan Tata proposed to the Ford Motor Company. Even in science, Inventions and discoveries don't happen overnight, Thomas Alva Edison was a really great inventor and he tried quite thousand times to form a filament bulb later, on being successful, Edison stated that he succeeded because he found thousand ways during which to not make the filament bulb.
